Name of the program: "Drawing Competitions on Energy Conservation"

Venue: Room No: 313

Summary report

Description: Energy conservation refers to the efforts made to reduce the consumption of energy. The energy on Earth is not in unlimited supply. Furthermore, energy can take plenty of time to regenerate. This certainly makes it essential to conserve energy. Most noteworthy, energy conservation is achievable either by using energy more efficiently or by reducing the amount of service usage.

Importance of Energy Conservation

First of all, energy conservation plays an important role in saving non-renewable energy resources. Furthermore, non-renewable energy sources take many centuries to regenerate. Moreover, humans consume energy at a faster rate than it can be produced. Therefore, energy conservation would lead to the preservation of these precious non-renewable sources of energy.

Another important reason for energy conservation is environmental protection. This is because various energy sources are significantly harmful to the environment. Furthermore, the burning of fossil fuels considerably pollutes the atmosphere. Moreover, nuclear energy creates dangerous nuclear waste. Hence, energy conservation will lead to environmental protection.

Poster presentation Competition was conducted under the sponsorship of AICTE (SPICES) in association with NSS & IEI Student Chapter on 21/12/2021 for which around 40 students of our college participated. Both boys and girls actively took part in the competition. The competition started at 2:30 pm in Room No:313 and ended at 3:30pm.
