# Software Engineering

## Course Objectives:

The students will have a broad understanding of the discipline of software engineering and its application to the development of and management of software systems.

#### Course Outcomes:

- knowledge of basic SW engineering methods and practices, and their appropriate application;
- general understanding of software process models such as the waterfall and evolutionary models.
- 3. understanding of the role of project management including planning scheduling, risk management, etc.
- understanding of software requirements and the SRS document□
- 5. understanding of different software architectural styles.
- understanding of implementation issues such as modularity and coding standards.
- 7. understanding of approaches to verification and validation including static analysis, and reviews.
- understanding of software testing approachs such as unit testing and integration testing □
- 9. understanding of software evolution and related issues such as version management.
- 10. understanding on quality control and how to ensure good quality software.
- understanding of some ethical and professional issues that are important for software engineers□
- development of significant teamwork and project based experience.

## Syllabus:

## UNIT I:

Introduction to Software Engineering: Software, Software Crisis, Software Engineering definition, Evolution of Software Engineering Methodologies, Software Engineering Challenges.

Software Processes: Software Process, Process Classification, Phased development life cycle, Software Development Process Models- Process, use, applicability and Advantages/limitations

#### UNIT II

Requirements Engineering: Software Requirements, Requirements engineering Process, Requirements elicitation, Requirements Analysis, Structured Analysis, Data Oriented Analysis, Object oriented Analysis, Prototyping Analysis, Requirements Specification, Requirements Validation, requirement Management.

#### UNIT III

Software Design: Software Design Process, Characteristics of Good Software Design, Design Principles, Modular Design, Design Methodologies, Structured Design, Structured Design Methodology, Transform Vs Transaction Analysis

Object-Oriented Design: Object oriented Analysis and Design Principles

#### UNIT IV:

Implementation: Coding Principles, Coding Process, Code verification, Code documentation

Software Testing: Testing Fundamentals, Test Planning, Black Box Testing, White Box Testing, Levels of Testing, Usability Testing, Regression testing, Debugging approaches

## UNIT V:

**Software Project Management**: Project Management Essentials, What is Project management, Software Configuration Management.

Project Planning and Estimation: Project Planning activities, Software Metrics and measurements, Project Size Estimation, Effort Estimation Techniques.

#### UNIT VI:

Software Quality: Software Quality Factors, Verification & Validation, Software Quality Assurance, The Capability Maturity Model

Software Maintenance: Software maintenance, Maintenance Process Models, Maintenance Cost, Reengineering, Reengineering activities, Software Reuse.

## TEXT BOOKS:

- 1. Software Engineering, concepts and practices, Ugrasen Suman, Cengage learning
- Software Engineering, 8/e, Sommerville, Pearson.
  Software Engineering, 7/e, Roger S.Pressman, TMH

# REFERENCE BOOKS:

- Software Engineering, A Precise approach, Pankaj Jalote, Wiley
  Software Engineering principles and practice, W S Jawadekar, TMH
  Software Engineering concepts, R Fairley, TMH
