| Note: | 1. Que | estion | Paper co | onsists o | of two        | parts | (Part-A | and | Part-B) |
|-------|--------|--------|----------|-----------|---------------|-------|---------|-----|---------|
|       | 2. An  | swer A | LL the   | questio   | n in <b>P</b> | art-A |         |     |         |

3. Answer any FOUR Questions from Part-B

#### PART -A

| 1. | a) | Write various ways to improve the clock rate.                                                                                                                                     | (2M) |
|----|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
|    | b) | With an example write about relative addressing.                                                                                                                                  | (2M) |
|    | c) | Differentiate post-indexed and pre-indexed addressing with write back policy.                                                                                                     | (3M) |
|    | d) | What is the use of PCI bus in a computer system?                                                                                                                                  | (2M) |
|    | e) | Write the major functionalities of disk controllers?                                                                                                                              | (3M) |
|    | f) | Explain 3 steps a processor perform to execute instruction.                                                                                                                       | (2M) |
|    |    | PART –B                                                                                                                                                                           |      |
| 2. | a) | What are the functional units of a computer system? Explain the way of handling information by each of them.                                                                      | (7M) |
|    | b) | Discuss the generations of computers based on the development technologies used to fabricate the processors, memories an I/O units.                                               | (7M) |
| 3. | a) | Differentiate the instruction execution for adding 'n' numbers using Straight line sequencing and branching                                                                       | (7M) |
|    | b) | Write short notes on shift and rotate instructions.                                                                                                                               | (7M) |
| 4. | a) | Differentiate relative and absolute addressing modes for branch instructions                                                                                                      | (7M) |
|    | b) | What is the format of arithmetic instruction in assembly language? Elaborate variants of OP code in it.                                                                           | (7M) |
| 5. | a) | How to meet device characteristics and addressing objectives by USB?                                                                                                              | (7M) |
|    | b) | Explain.<br>Explain the usage of daisy chains and priority in simultaneous interrupt handling.                                                                                    | (7M) |
| 6. | a) | Write about flash memory and read only memories. Explain their applications.                                                                                                      | (7M) |
|    | b) | Write about locality of preference, write-through protocol, copy-back protocol and early restart protocol in cache memory.                                                        | (7M) |
| 7. | a) | Explain the following.                                                                                                                                                            | (4+5 |
|    |    | <ul> <li>a) Single bus organization of the data path inside a processor.</li> <li>b) Micro program sequencing.</li> <li>c) Micro instructions with next address field.</li> </ul> | +5M) |

Max. Marks: 70

Note: 1. Question Paper consists of two parts (**Part-A** and **Part-B**) 2. Answer **ALL** the question in **Part-A** 

3. Answer any FOUR Questions from Part-B

#### PART -A

| 1. | a)   | What is optimizing compiler?                                                                                                                                                                                                          | (2M)               |
|----|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
|    | b)   | Write short notes on additional addressing modes.                                                                                                                                                                                     | (2M)               |
|    | c)   | How to determine branch target address?                                                                                                                                                                                               | (2M)               |
|    | d)   | Write about the transfer of control between programs through interrupts.                                                                                                                                                              | (3M)               |
|    | e)   | Differentiate logical and physical addresses.                                                                                                                                                                                         | (2M)               |
|    | f)   | What is micro programmed control and micro routines?                                                                                                                                                                                  | (3M)               |
| PA | RT - | <u>-B</u>                                                                                                                                                                                                                             |                    |
| 2. | a)   | Write about various general purpose registers involved in the typical computer                                                                                                                                                        | (7M)               |
|    | b)   | "System software is responsible for coordination of all activities in a computing system"-Justify this statement with the functionalities of it.                                                                                      | (7M)               |
| 3. | a)   | Write about various means by which data are transferred between memory of a computer and outside world                                                                                                                                | (7M)               |
|    | b)   | Write the subroutines for parameter passing through registers.                                                                                                                                                                        | (7M)               |
| 4. | a)   | Write in detail, about register operands, immediate operands and shifted immediate operands of arithmetic and logic instructions                                                                                                      | (14M<br>)          |
| 5. | a)   | Explain typical read operation with various data transfer signals on the PCI                                                                                                                                                          | (7M)               |
|    | b)   | Write about two different approaches for bus arbitration.                                                                                                                                                                             | (7M)               |
| 6. | a)   | Explain how large storage can be implemented with optical disks.                                                                                                                                                                      | (7M)               |
|    | b)   | Discuss the possible methods for specifying the placement of memory blocks in cache.                                                                                                                                                  | (7M)               |
| 7. | a)   | <ul> <li>Explain the following.</li> <li>a) Role of MDR in fetching a word from memory.</li> <li>b) Control sequence that implements unconditional branch instructions.</li> <li>a) Black diagram of a complete processor.</li> </ul> | (4M+<br>5M+<br>5M) |

c) Block diagram of a complete processor.

Note: 1. Question Paper consists of two parts (Part-A and Part-B)
2. Answer ALL the question in Part-A
3. Answer any FOUR Questions from Part-B

• •

## PART -A

| 1. | a) | Write a short note on bus structures used in computer system.                                                                                                  | (2M)       |
|----|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
|    | b) | Give example for left and right shift operations.                                                                                                              | (2M)       |
|    | c) | Discuss load/store instructions for multiple operands.                                                                                                         | (3M)       |
|    | d) | What do you mean by vectored interrupts?                                                                                                                       | (2M)       |
|    | e) | Differentiate static and dynamic RAMs.                                                                                                                         | (2M)       |
|    | f) | Write a short notes on wide-branch addressing                                                                                                                  | (3M)       |
|    |    | PART –B                                                                                                                                                        |            |
| 2. | a) | Explain the importance of instruction set in measuring the performance of a computer system.                                                                   | (7M)       |
|    | b) | Discuss various computer types with their applications in real world environment.                                                                              | (7M)       |
| 3. | a) | What is register transfer notation? Write and explain these notations to three-                                                                                | (7M)       |
|    | b) | address, two-address, single address and zero-address instruction types.<br>Illustrate the concept of assembly directives with an assembly language<br>program | (7M)       |
| 4. |    | What are the conditional branch instructions? Explain each with an example                                                                                     | (14M)      |
| 5. | a) | What are the main phases involved in the operation of SCSI bus.                                                                                                | (7M)       |
|    | b) | List the functionalities of I/O interface. Draw and explain a combined input/output interface circuit.                                                         | (7M)       |
| 6. | a) | Relate the access speed, size and cost of various memories in memory                                                                                           | (7M)       |
|    | b) | "RAID disks offers excellent performance and large &reliable storage"- Justify<br>this statement through various levels.                                       | (7M)       |
| 7. |    | Explain the following.                                                                                                                                         | (4M+       |
